

## Introduction of the EZ-Load IST Test Coupon Fixture

Issued By: Jason Furlong  
Issued Date: 20-07-2017

PWBi and customers have identified issues related to loading and stabilizing test coupons in our IST test systems.

The issues include:

- 1) Difficulty securing smaller coupons in the test heads
- 2) Noise in the test data caused by coupon movements during cooling
- 3) Noise in the test data when a coupon is removed from the tester and replaced
- 4) Damage to coupons with surface mount connectors during loading
- 5) General difficulty in loading coupons with three test leads

We have designed a fixture which will elevate the coupon off the grill and hold the test coupon securely during the test. The quick-release knob / slider mechanism makes it easy to adjust the fixture to accommodate any test coupon length. It is a drop-in replacement for the existing test head on ALL models of PWBi IST testers.

If you have any questions or would like a quote please contact PWBi or your local PWBi representative.
